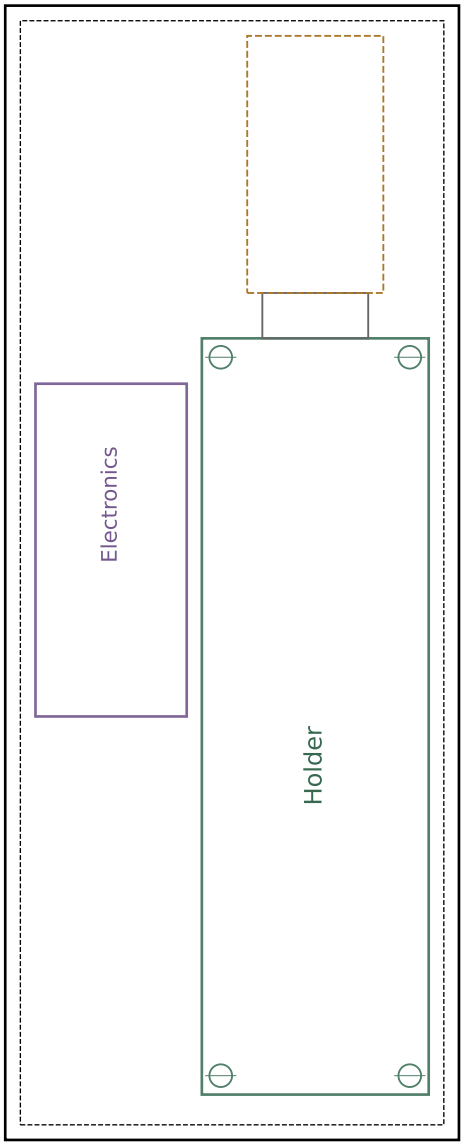
ALIVE enclosure, paper fit check

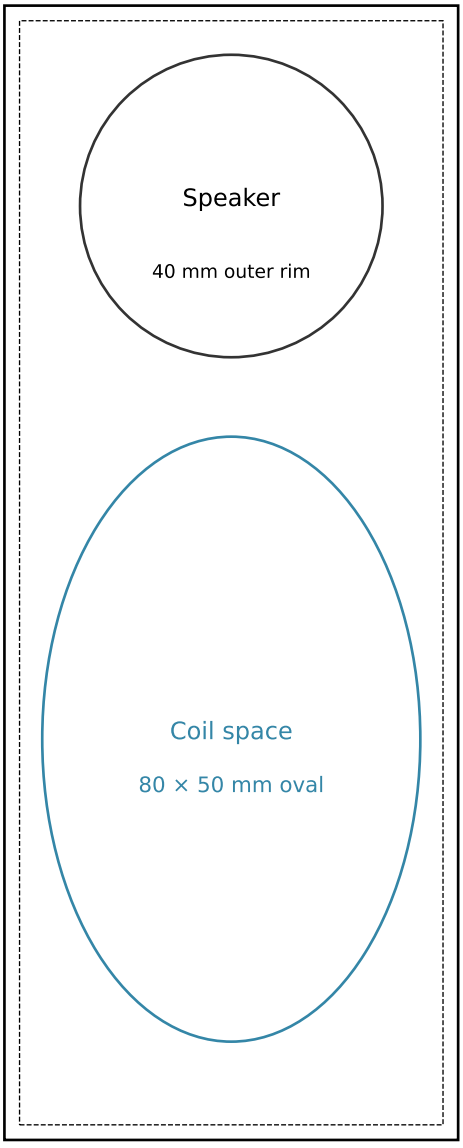
Print at 100%. Disable fit-to-page scaling. Measure the 100 mm bar first.

Rear layer



60 mm outside width

Front layer



60 mm outside width

This bar must measure exactly 100 mm.

Holder hole centres are 25 mm apart across the board and 95 mm along its length.

The two layers occupy different depths. This sheet checks their footprints only.

Electronics height is 25 mm. Coil height allowance is 19 mm and needs a physical check.

The lid, strap contact, printed tolerances and acoustic output still need physical checks.
